## B.S. program in Mathematics

### 1.1 Curriculum for those who joined in July 2023 or later.

| First Semester |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Course | Name | L | T | P | C |
| CH117 | Chemistry Lab |  |  |  | 3 |
| GC101 | Gender in the work- <br> place |  |  |  | 4 |
| MA105 | Calculus | 3 | 1 | 0 | 8 |
| MA113 | Mathematics and Its <br> History | 2 | 1 | 0 | 6 |
| MA114 | Introduction to Math- <br> ematical Concepts | 3 | 0 | 0 | 6 |
| MS101 | Makerspace |  |  |  | 8 |
| NOCS01 | National Cadet Corps <br> National Sports Or- <br> ganization National <br> Sports Organization <br> National Service <br> Scheme |  |  |  |  |

| Second Semester |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Course | Name | L | T | P | C |
| CS101 | Computer Programming and Utilization |  |  |  | 6 |
| $\begin{aligned} & \hline \text { HSS/ } \\ & \text { IDC/ } \\ & \text { ENT } \end{aligned}$ | Introduction to HASMED |  |  |  | 8 |
| MA110 | Linear Algebra and Differential Equations | 3 | 1 | 0 | 8 |
| NOCS02 | National Cadet Corps National Sports Organization National Sports Organization National Service Scheme |  |  |  | $\begin{aligned} & \mathrm{P} / \\ & \mathrm{NP} \end{aligned}$ |
| PH110 | Introduction to Classical and Quantum Physics | 3 | 1 | 0 | 8 |
| PH117 | Physics Lab |  |  |  | 3 |

| Third Semester |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Course | Name | $\mathbf{L}$ | $\mathbf{T}$ | $\mathbf{P}$ | C |
| EC101 | Economics |  |  |  | 6 |
| MA401 | Linear Algebra | 3 | 1 | 0 | 8 |
| MA403 | Real Analysis | 3 | 1 | 0 | 8 |
| MA419 | Basic Algebra | 3 | 1 | 0 | 8 |
| SI427 | Probability 1 | 3 | 1 | 0 | 8 |

| Fourth Semester |  |  |  |  | L |
| :--- | :--- | :--- | :--- | :--- | :--- |
| T | P | C |  |  |  |
| Course | Name |  |  |  | 3 |
| ES250 | Environmental Stud- <br> ies |  |  |  | 3 |
| HS250 | Environmental Stud- <br> ies |  |  |  |  |
| MA406 | General Topology | 3 | 1 | 0 | 8 |
| MA410 | Multivariable Calcu- <br> lus | 2 | 1 | 0 | 6 |
| MA412 | Complex Analysis | 3 | 1 | 0 | 8 |

Fifth Semester

| Course | Name | $\mathbf{L}$ | $\mathbf{T}$ | $\mathbf{P}$ | $\mathbf{C}$ |
| :--- | :--- | :--- | :--- | :--- | :--- |
| HSxxx | Introduction to Lit- <br> erature/ Philosophy/ <br> Sociology |  |  |  | 6 |
| MA417 | Ordinary Differential <br> Equations | 3 | 1 | 0 | 8 |
| SI419 | Combinatorics | 3 | 1 | 0 | 8 |
| SI507 | Numerical Analysis | 3 | 1 | 0 | 8 |
|  | Inst Elective |  |  |  | 6 |

## Seventh Semester

| Course | Name | $\mathbf{L}$ | $\mathbf{T}$ | $\mathbf{P}$ | $\mathbf{C}$ |
| :--- | :--- | :---: | :---: | :---: | :---: |
| MA503 | Functional Analysis | 3 | 1 | 0 | 8 |
| MA515 | Partial Differential <br> Equations | 3 | 1 | 0 | 8 |
|  | Dept Elective |  |  |  | 6 |
|  | Dept Elective |  |  |  | 6 |
|  | Inst Elective |  |  |  | 6 |

## Sixth Semester

| Course | Name | L | T | P | C |
| :--- | :--- | :---: | :---: | :---: | :---: |
| MA408 | Measure Theory | 3 | 1 | 0 | 8 |
| MA414 | Algebra 1 | 2 | 1 | 0 | 6 |
|  | Dept Elective |  |  |  | 6 |
|  | Dept Elective |  |  |  | 6 |
|  | Inst Elective |  |  |  | 6 |

## Eighth Semester

| Course | Name | L | T | $\mathbf{P}$ | $\mathbf{C}$ |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  | Dept Elective |  |  |  | 6 |
|  | Dept Elective |  |  |  | 6 |
|  | Dept Elective |  |  |  | 6 |
|  | Dept Elective |  |  |  | 6 |
|  | Inst Elective |  |  | 6 |  |

## Chapter 2

## Integrated M.Sc. program in Mathematics

### 2.1 Minimum Requirements

The minimum requirements for students to obtain a 5 -year Integrated M.Sc. degree are as follows:
(1) Number of core courses: 2 HSS courses + HSS Environmental Science + CESE Environmental Science + 10 MA courses (excludes MA 1xx courses) $=14$.
(2) Compulsory Project in the 5th year.
(3) Number of Credits in core courses (counted as above): 92
(4) Number of credits for the project: 30
(5) Minimum number of Department electives: 9
(6) Minimum no of credits in department electives (including the Advanced Electives): 54
(7) Minimum no of Institute electives: 2
(8) Minimum No of credits in institute electives: 12
(9) Minimum No of credits: 330

### 2.2 Curriculum for students switching after first year

| Third Semester |  |  |
| :--- | :--- | :--- |
| Code | Course Title | C |
| MA401 | Linear Algebra | 8 |
| MA403 | Real Analysis | 8 |
| MA419 | Basic Algebra | 8 |
| SI419 | Combinatorics | 6 |

| Fourth Semester |  |  |
| :--- | :--- | :--- |
| Code | Course Title | C |
| MA214 | Numerical Analysis | 8 |
| MA406/ | General Topology/Complex | 8 |
| MA412 | Analysis | 6 |
| MA410 | Multivariable Calculus | 6 |
| MA414 | Algebra I | 8 |

| Fifth Semester |  |  |
| :--- | :--- | :--- |
| Code | Course Title | C |
| HS301 | Ordinary Differential Equa- | 8 |
| MA417 | Ord <br> tions | 8 |
| SI427 | Probability I | 6 |
|  | Dept Elective | 6 |
|  | Inst Elective |  |

| Sixth Semester |  |  |
| :--- | :--- | :--- |
| Code | Course Title | C |
| ES200 | Environmental Science | 3 |
| HS200 | Environmental Science | 3 |
| MA406/ <br> MA412 | General Topology/Complex <br> Analysis | 8 |
| MA408 | Measure Theory | 8 |
| SI404 | Applied Stochastic Pro- <br> cesses | 8 |
|  | Inst Elective | 6 |

| Seventh Semester |  |  |
| :--- | :--- | :--- |
| Code | Course Title | C |
| MA503 | Functional Analysis | 8 |
| MA515 | Partial Differential Equa- <br> tions | 8 |
|  | Dept Elective | 6 |
|  | Dept Elective | 6 |
|  | Inst Elective | 6 |

| Eighh Semester |  |  |
| :--- | :--- | :--- |
| Code | Course Title | C |
| MA450 | Independent study | 6 |
|  | Dept Elective | 6 |
|  | Dept Elective | 6 |
|  | Dept Elective | 6 |
|  | Dept Elective | 6 |
|  | Inst Elective | 6 |

| Ninth Semester |  |  |
| :--- | :--- | :--- |
| Code | Course Title | C |
|  | Advance Elective | 6 |
|  | Dept Elective | 6 |
|  | Dept Elective | 6 |
|  | Dept Elective | 6 |
|  | Project | 12 |

| Tenth Semester |  |  |
| :--- | :--- | :--- |
| Code | Course Title | C |
|  | Advance Elective | 6 |
|  | Dept Elective | 6 |
|  | Project | 18 |

Total credits for eight semesters $=264$.

Independent Study: The student should pursue a topic of his or her choice for one semester under the supervision of a faculty member. The course is the analogue of the "Seminar" courses that undergraduate students were required to take in previous years. The Independent Study should end with a presentation to the supervising faculty member and the preparation of a brief report of about ten pages.

Department Electives may include any Department Elective offered or Ph.D. course offered in the relevant semester. The existing departmental rules for prerequisites for these courses will apply.

The Advanced Elective listed in Semesters 9 and 10 must be one of the core Ph.D. courses (that is, not a "Topics" course). These are:

For Semester 9 (Advanced Elective): MA 813 (Algebra I), MA 819 (Measure Theory), MA 815 (Differential Topology), MA 817 (Partial Differential Equations), MA 833 (Weak Convergence and Martingale Theory), MA 821 (Theory of Estimation)

For Semester 10 (Advanced Elective): MA 812 (Algebra II), MA 814 (Complex Analysis), MA 816 (Algebraic Topology), MA818 (Partial Differential Equations II), MA 820 (Stochastic Processes), MA 822 (Testing of Hypothesis), MA 824 (Functional Analysis

### 2.3 Curriculum for students switching after second year

### 2.3.1 Eligibility

The department will use its discretion to admit students who apply for a branch change after their second year. Students will not be admitted after their second year unless they have already completed MA 403 (Real Analysis) and at least one of MA 406 (General Topology), MA 410 (Multivariable calculus), MA 412 (Complex Analysis), MA 419 (Basic Algebra) or MA 414 (Algebra I). Other criteria, such as performance in these courses, may also be used to determine eligibility.

| Fifth Semester |  |  |
| :--- | :--- | :--- |
| Code | Course Title | C |
| HS301 |  | 6 |
| MA401 | Linear Algebra | 8 |
| MA417 | Ordinary Differential Equa- <br> tions | 8 |
| MA419 | Basic Algebra | 8 |
| SI419 | Combinatorics | 6 |

| Sixth Semester* |  |  |
| :--- | :--- | :--- |
| Code | Course Title | C |
| ES200 | Environmental Science | 3 |
| HS200 | Environmental Science | 3 |
| MA406 | General Topology | 8 |
| MA408 | Measure Theory | 8 |
| MA410 | Multivariable Calculus | 6 |
| MA412 | Complex Analysis | 8 |
| MA414 | Algebra I | 8 |
| SI416 | Optimization | 8 |

*In Semester 6, it is expected that the student will take 4 out of the 5 MA courses.

| Seventh Semester |  |  |
| :--- | :--- | :--- |
| Code | Course Title | C |
| MA503 | Functional Analysis | 8 |
| MA515 | Partial Differential Equa- <br> tions | 8 |
| SI427 | Probability I | 8 |
|  | Dept Elective | 6 |
|  | Inst Elective | 6 |

| Eighh Semester |  |  |
| :--- | :--- | :--- |
| Code | Course Title | C |
| MA450 | Independent study | 6 |
| SI404 | Applied Stochastic Pro- <br> cesses | 8 |
|  | Dept Elective | 6 |
|  | Dept Elective | 6 |
|  | Dept Elective | 6 |
|  | Inst Elective | 6 |

| Ninth Semester |  |  |
| :--- | :--- | :--- |
| Code | Course Title | C |
|  | Advance Elective | 6 |
|  | Dept Elective | 6 |
|  | Dept Elective | 6 |
|  | Dept Elective | 6 |
|  | Project | 12 |

| Tenth Semester |  |  |
| :--- | :--- | :--- |
| Code | Course Title | C |
|  | Advance Elective | 6 |
|  | Dept Elective | 6 |
|  | Dept Elective | 6 |
|  | Project | 18 |

Total credits for six semesters $=220$.

Independent Study: The student should pursue a topic of his or her choice for one semester under the supervision of a faculty member. The course is the analogue of the "Seminar" courses that undergraduate students were required to take in previous years. The Independent Study should end with a presentation to the supervising faculty member and the preparation of a brief report of about ten pages.

Department Electives may include any Department Elective offered or Ph.D. course offered in the relevant semester. The existing departmental rules for prerequisites for these courses will apply.

The Advanced Elective listed in Semesters 9 and 10 must be one of the core Ph.D. courses (that is, not a "Topics" course). These will be courses with numbers MA8xx.

For Semester 9 (Advanced Elective): MA 813 (Algebra I), MA 819 (Measure Theory), MA 815 (Differential Topology), MA 817 (Partial Differential Equations), MA 833 (Weak Convergence and Martingale Theory), MA 821 (Theory of Estimation)

For Semester 10 (Advanced Elective): MA 812 (Algebra II), MA 814 (Complex Analysis), MA 816 (Algebraic Topology), MA818 (Partial Differential Equations II), MA 820 (Stochastic Processes), MA 822 (Testing of Hypothesis), MA 824 (Functional Analysis

## Chapter 3

## Conversion from B.S. in Mathematics to dual degree M.Sc. in Mathematics

B.S. students wishing to switch to the dual degree program should write a letter to the Convener of the DUGC, asking for admission to the program, after completing their sixth semester, and no later than the end of the second month (usually February) of their seventh semester.

A student wishing to enter the dual degree program, at the time of applying, should have a CPI of at least 7.00 and no backlog courses.

Students meeting the admission criteria will be given provisional admission to the dual degree program by the DUGC. This admission will be confirmed at the beginning of the ninth semester if the student has no backlog courses.

Students entering the dual degree program in the fifth year will follow the course structure of the final year of the five-year Integrated M.Sc. program in mathematics. Students will have to do a Project over two semesters. Specifically the course structure will be the following:

- Semester 9: 1 Advanced Elective (Ph.D. level course) (6 credits), 3 Departmental Electives (18 credits) and 1 Project ( 12 credits). Total: 36 credits.
- Semester 10: 1 Advanced Elective (Ph.D. level course) (6 credits), 2 Departmental Electives (12 credits) and 1 Project ( 18 credits). Total: 36 credits

Thus students opting for this program will do an additional 72 credits of coursework and project work.

## Chapter 4

## Conversion from B.S. in Mathematics to dual degree M.Sc. in Statistics

### 4.1 Introduction

The BS in Mathematics + MSc in Statistics dual degree at IIT Bombay is designed to help BS Mathematics students with an interest in Statistics and Data Science to augment their undergraduate academic programs with an additional one year specialization in Statistics and Probability. The curriculum includes both basic and advanced courses in Statistics and Probability. Motivated students will benefit from the presence of active research group in the area. The number of enrollments in this program is capped at 5 .
B.S. students wishing to switch to the dual degree program should write a letter to the Convener of the DUGC, asking for admission to the program, after completing their sixth semester, and no later than the end of the second month (usually February) of their seventh semester.

A student wishing to enter the dual degree program, at the time of applying, should have a CPI of at least 7.00 and no backlog courses.

Students meeting the admission criteria will be given provisional admission to the dual degree program by the DUGC. This admission will be confirmed at the beginning of the ninth semester if the student has no backlog courses.

### 4.2 Degree requirements

Students entering the dual degree program after completion of 6 th Semester (latest by 2 months after starting of their 7th Semester) need to complete
(a) at least 2 electives from the below list SI courses by 8th semester.
(b) at least 18 credits based on courses from the below list of SI courses in each of 9th and 10th semester.
(c) a project of 18 credits in each of 9th and 10th semester.

### 4.3 List of courses

(1) SI404 Applied Stochastic Processes
(2) SI422 Regression Analysis
(3) SI424 Statistical Inference I
(4) SI416 Optimization
(5) SI426 Algorithms
(6) SI431 Introduction to Data Analysis using R
(7) SI503 Categorical Data Analysis
(8) SI505 Multivariate Analysis
(9) SI509 Time Series Analysis
(10) SI515 Statistical Techniques in Data Mining
(11) SI526 Experimental Designs
(12) SI527 Introduction to Derivative Pricing
(13) SI534 Non-parametric Statistics
(14) SI513 Theory of Sampling
(15) SI514 Statistical Modelling
(16) SI536 Analysis of Multi-Type and Big Data
(17) SI537 Probability 2
(18) SI539 Random Graphs
(19) SI541 Statistical Epidemiology
(20) SI543 Asymptotic Statistics
(21) SI544 Martingale theory
(22) SI546 Statistical Inference II
(23) SI548 Computational Statistics

Thus students opting for this program will need do at least an additional 72 credits of coursework and project work in fifth year.

## Chapter 5

## Interdisciplinary dual degree program in Mathematics

### 5.1 Introduction

The IDDDP in Mathematics at IIT Bombay is designed to help students with an interest in mathematics to augment their undergraduate academic programs with an additional one year specialization in mathematics. The curriculum includes basic courses in algebra, combinatorics, calculus and analysis, differential equations, and probability. More advanced courses in these subjects, as well as in geometry, topology, number theory, numerical analysis, statistics, and theoretical computer science will be on offer. Motivated students will benefit from the presence of active research groups in all of these areas.

Students wishing to get admission into the IDDDP in Mathematics should write a letter to the Convener of the DUGC (Mathematics), asking for admission to the program.

### 5.2 Degree requirements

Let $S$ be the following collection of courses:
(1) MA401 Linear Algebra
(2) MA403 Real Analysis
(3) MA417 ODE
(4) MA419 Basic Algebra
(5) MA406 General Topology
(6) MA408 Measure Theory
(7) MA410 Multivariable Calculus
(8) MA412 Complex Analysis
(9) MA414 Algebra-1 (Galois Theory)
(10) MA503 Functional Analysis
(11) MA515 PDE
(12) MA523 Basic Number Theory
(13) SI419 Combinatorics
(14) SI427 Probability 1
(15) SI507 Numerical Analysis

Candidates interested in the IDDDP of the Mathematics Department should satisfy the following criteria:
(1) By end of 3rd year (while applying) the applicant should have
(a) $\mathrm{CPI} \geqslant 8.0$,
(b) no FF/FR in any MA/SI courses at any point of time,
(c) an average CPI $\geqslant 8.5$ in the courses from $S$ completed by the applicant, and
(d) completed at least 4 courses from $S$.
(2) By the end of 4th year, the applicant should have completed
(a) any required courses offered by other departments (e.g, CS101, ES200, HS200, etc.), and
(b) at least 7 courses from $S$ (in consultation with the faculty advisor). ${ }^{1}$
(3) At the end of their fifth year, the student should have done at least 12 courses from $S .{ }^{2}$
(4) In the fifth year, the applicant should take at least 5 departmental courses in each semester. Number of courses may be reduced with the approval of faculty advisor if the student is doing a project. ${ }^{3}$
(5) A project will be of 36 credits. The student should overall complete 124 credits (of MA $4 \mathrm{xx}, 5 \mathrm{xx}, 8 \mathrm{xx}$ courses) to get the degree. ${ }^{4}$

[^1]
## Chapter 6

## Interdisciplinary dual degree program in Statistics

### 6.1 Introduction

The IDDDP in Statistics at IIT Bombay is designed to help students with an interest in Statistics and Data Science to augment their undergraduate academic programs with an additional one year specialization in Statistics. The curriculum includes both basic and advanced courses in Statistics and Probability. Motivated students will benefit from the presence of active research group in the area. The number of enrollments in this program is capped at 5 .

Students wishing to get admission into the IDDDP in Statistics should write a letter to the Convener of the DUGC (Mathematics), asking for admission to the program.

### 6.2 Degree requirements

Let $S_{1}$ be the following set of courses:
(1) MA403 Real Analysis
(2) SI404 Applied Stochastic Processes
(3) SI422 Regression Analysis
(4) SI424 Statistical Inference I
(5) SI427 Probability 1

Let $S_{2}$ be the following set of courses:
(1) MA401 Linear Algebra
(2) SI416 Optimization
(3) SI419 Combinatorics
(4) SI426 Algorithms
(5) SI431 Introduction to Data Analysis using R
(6) SI503 Categorical Data Analysis
(7) SI505 Multivariate Analysis
(8) SI509 Time Series Analysis
(9) SI515 Statistical Techniques in Data Mining
(10) SI526 Experimental Designs
(11) SI527 Introduction to Derivative Pricing
(12) SI534 Non-parametric Statistics

Let $S_{3}$ be the following set of courses:
(1) SI507 Numerical Analysis
(2) SI513 Theory of Sampling
(3) SI514 Statistical Modelling
(4) SI536 Analysis of Multi-Type and Big Data
(5) SI537 Probability 2
(6) SI539 Random Graphs
(7) SI541 Statistical Epidemiology
(8) SI543 Asymptotic Statistics
(9) SI544 Martingale theory
(10) SI546 Statistical Inference II
(11) SI548 Computational Statistics

Candidates interested in the IDDDP in Statistics should satisfy the following criteria:
(1) By end of 3rd year (while applying) the applicant should have
(a) $\mathrm{CPI} \geqslant 8$,
(b) completed MA403 (Real Analysis) and at least 3 courses out of remaining 4 in $S_{1}$,
(c) no FF/FR in any MA/SI courses at any point of time.
(2) By the end of 4th year, the applicant should have completed
(a) any required courses offered by other departments (e.g, CS101, ES200, HS200, etc.), and
(b) at least 8 courses from $S_{1}$ or $S_{2}$.
(3) At the end of the fifth year, the student should have done at least 12 courses from $S_{1}$ or $S_{2}$ or $S_{3}$.
(4) In 2.(b) and 3., a student can replace a particular course in $S_{2}$ or $S_{3}$ with an advanced PhD level course in the same broad area in consultation with the faculty advisor.
(5) The student should overall complete 124 credits (of the courses from above lists and/or project) to get the degree. A project will be of 36 credits.

## Chapter 7

## Two year M.Sc. program in Mathematics

### 7.1 Curriculum

| First Semester |  |  |  |  |  |
| :--- | :--- | :---: | :---: | :---: | :---: |
| Course | Name | L | T | P | C |
| SI427 | Probability 1 | 3 | 1 | 0 | 8 |
| MA401 | Linear Algebra | 3 | 1 | 0 | 8 |
| MA403 | Real Analysis | 3 | 1 | 0 | 8 |
| MA417 | Ordinary Differential <br> Equations | 3 | 1 | 0 | 8 |
| MA419 | Basic Algebra | 3 | 1 | 0 | 8 |

| Second Semester |  |  |  |  |  |
| :--- | :--- | :---: | :---: | :---: | :---: |
| Course | Name | L | T | P | C |
| MA406 | General Topology | 3 | 1 | 0 | 8 |
| MA408 | Measure Theory | 3 | 1 | 0 | 8 |
| MA410 | Multivariable Calcu- <br> lus | 2 | 1 | 0 | 6 |
| MA412 | Complex Analysis | 3 | 1 | 0 | 8 |
| MA414 | Algebra 1 | 3 | 1 | 0 | 8 |

Third Semester

| Course | Name | $\mathbf{L}$ | $\mathbf{T}$ | $\mathbf{P}$ | C |
| :--- | :--- | :--- | :--- | :--- | :--- |
| MA503 | Functional Analysis | 3 | 1 | 0 | 8 |
| MA515 | Partial Differential <br> Equations | 3 | 1 | 0 | 8 |
| MA593 | Project (Optional) |  |  |  | 4 |

## Chapter 9

## List of Electives

| Odd Semester Electives |  |
| :--- | :--- |
| Course | Name |
| MA521 | Theory of Analytic Functions |
| MA523 | Basic Number Theory |
| MA525 | Dynamical Systems |
| MA538 | Representation Theory of Finite <br> Groups |
| MA539 | Spline Theory and Variational <br> Methods |
| MA556 | Differential Geometry |
| MA581 | Elements of Differential Topology |
| MA5101 | Algebra 2 |
| MA5103 | Algebraic Combinatorics 2 1 0 6 |
| MA5105 | Coding Theory |
| MA5107 | Continuum Mechanics |
| MA5109 | Graph Theory |
| MA5111 | Theory of Finite Semigroups |
| MA5113 | Category Theory 1 |
| MA5115 | Hopf Algebras |
| SI507 | Numerical Analysis |
| SI513 | Theory of Sampling |
| SI515 | Statistical Techniques in Data <br> Mining |
| SI537 | Probability 2 |
| SI539 | Random Graphs |
| SI541 | Statistical Epidemiology |
| SI543 | Asymptotic Statistics |

| Even Semester Electives |  |
| :--- | :--- |
| Course | Name |
| MA504 | Operators on Hilbert Spaces |
| MA510 | Introduction to Algebraic Geometry |
| MA518 | Spectral Approximation |
| MA524 | Algebraic Number Theory |
| MA526 | Commutative Algebra |
| MA528 | Hyperplane Arrangements |
| MA530 | Nonlinear Analysis |
| MA532 | Analytic Number Theory |
| MA534 | Modern Theory of PDE |
| MA540 | Numerical Methods for Partial Differential <br> Equations |
| MA562 | The Mathematical Theory of Finite Ele- <br> ments |
| MA5102 | Basic Algebraic Topology |
| MA5104 | Hyperbolic Conservation Laws |
| MA5106 | Introduction to Fourier Analysis |
| MA5108 | Lie Groups and Lie Algebras |
| MA5110 | Non-commutative Algebra |
| MA5112 | Introduction to Mathematical Methods |
| MA5116 | Species and Operads |
| MA5118 | Category Theory 2 |
| MA606 | Coxeter Groups |
| SI416 | Optimization |
| S514 | Statistical Modelling |
| SI527 | Introduction to Derivative Pricing |
| S553 | Nonparametric Statistics |
| S536 | Analysis of Multi-Type and Big Data |
| S544 | Martingale theory |
| S546 | Statistical Inference II |
| S5548 | Computational Statistics |
| S550 | Weak Convergence and Empirical Processes |

### 9.1 Ph.D. courses

Apart from the above listed electives, a student may also opt for a Ph.D. level course as an elective subject to the approvals from the course instructor and the faculty advisor. The list of Ph.D. courses offered in the department are as follows:

| Odd Semester Electives |  |
| :--- | :--- |
| Course | Name |
| MA811 | Algebra 1 |
| MA813 | Measure Theory |
| MA815 | Differential Topology |
| MA817 | Partial Differential Equations 1 |
| MA833 | Weak Convergence and Martin- <br> gale Theory |
| MA839 | Advanced Commutative Algebra |
| MA841 | Topics in Algebra 1 |
| MA843 | Topics in Analysis 1 |
| MA845 | Topics in Combinatorics 1 |
| MA847 | Topics in Geometry 1 |
| MA849 | Topics in Topology 1 |
| MA851 | Topics in Number Theory 1 |
| MA853 | Topics in Differential Equations 1 |
| MA855 | Topics in Numerical Analysis 1 |
| MA857 | Topics in Probability 1 |
| MA859 | Topics in Statistics I |
| MA861 | Combinatorics 1 |
| MA863 | Theoretical Statistics 1 |
| MA864 | Topics in Category Theory 1 |

| Even Semester Electives |  |
| :--- | :--- |
| Course | Name |
| MA812 | Algebra 2 |
| MA814 | Complex Analysis |
| MA816 | Algebraic Topology |
| MA818 | Partial Differential Equations 2 |
| MA820 | Stochastic Processes |
| MA823 | Probability |
| MA824 | Functional Analysis |
| MA842 | Topics in Algebra 2 |
| MA844 | Topics in Analysis 2 |
| MA846 | Topics in Combinatorics 2 |
| MA848 | Topics in Geometry 2 |
| MA850 | Topics in Topology 2 |
| MA852 | Topics in Number Theory 2 |
| MA854 | Topics in Differential Equations 2 |
| MA856 | Topics in Numerical Analysis II |
| MA858 | Topics in Probability II |
| MA860 | Topics in Statistics II |
| MA862 | Combinatorics 2 |
| MA865 | Topics in Category Theory 2 |
| MA867 | Statistical Modelling - 1 |

| Description | Complex numbers as ordered pairs. Argand's diagram. Triangle inequality. <br> De Moivre's Theorem. <br> Algebra: Quadratic equations and expressions. Permutations and combina- <br> tions. Binomial theorem for a positive integral index. <br> Coordinate Geometry: Locus, Straight lines. Equations of circle, parabola, <br> ellipse and hyperbola in standard forms. Parametric representation. <br> Vectors: Addition of vectors. Multiplication by a scalar. Scalar product, cross <br> product and scalar triple product with geometrical applications. <br> Matrices and Determinants: Algebra of matrices. Determinants and their <br> properties. Inverse of a matrix. Cramer's rule. |

| Description | Function, Inverse function, Elementary functions and their graphs, Limit, Con- <br> tinuity, Derivative and its geometrical significance. Differentiability. Deriva- <br> tives of sum, difference, product and quotient of functions. Derivatives of poly- <br> nomial, rational, trigonometric, logarithmic, exponential, hyperbolic, inverse <br> trigonometric and inverse hyperbolic functions. Differentiation of compos- <br> ite and implicit functions. Tangents and Normals, Increasing and decreasing <br> functions. Maxima and Minima. Integrations as the inverse process of differ- <br> entiation, Integration by parts and by substitution. Definite integrals and its <br> application to the determination of areas. |

Kreyszig, Advanced Engineering Mathematics (8th Edition), John Wiley, 1999. |
| Description | Vectors in $\mathbb{R}^{n}$, linear independence and dependence, linear span of a set of vectors, vector subspaces of $\mathbb{R}^{n}$, basis of a vector subspace. Systems of linear equations, matrices and Gauss elimination, row space, null space, and column space, rank of a matrix. Determinants and rank of a matrix in terms of determinants. Abstract vector spaces, linear transformations, matrix of a linear transformation, change of basis and similarity, rank-nullity theorem. Inner product spaces, Gram-Schmidt process, orthonormal bases, projections and least squares approximation. Eigenvalues and eigenvectors, characteristic polynomials, eigenvalues of special matrices (orthogonal, unitary, hermitian, symmetric, skew-symmetric, normal), algebraic and geometric multiplicity, diagonalization by similarity transformations, spectral theorem for real symmetric matrices, application to quadratic forms. |

| Course Code | MA 113 ( ... continued from previous page) |
| :---: | :---: |
| Course Name | Mathematics and Its History |
| Description | Part I 1. Copernican revolution, Galileo versus Church, Kepler and Newton (JB - Chapter 6 and 7). 2. Enlightenment movement and Romantic movement and further professionalisation (BS - Chapter 6, 7 and 11). 3. Industrial revolution and engines (JB - Chapter 8) 4. Electromagnetism (BS - Chapter 8) 5. Darwin and Mendel (JB - Chapter 9 and 12; BS - Chapter 23). Part II 1. History of Algebra: Quadratic equations, solutions to cubics and quartics, higher degree equations and insolvability. algebra and geometry of complex numbers, fundamental theorem of algebra (Stillwell - Chapters 6 and 14). 2. History of Calculus and Geometry: The regular polyhedra, conic sections, coordinate geometry (Stillwell - Chapter 2 and 7). Early results on areas and volumes, maxima, minima and tangents, infinite series, Leibniz's calculus (Stillwell - Chapter 9). The isoperimetric inequality (PCM - III. 94 , IV. 26 and V.19). 3. History of Number Theory and Combinatorics: Pythagorean triples, prime numbers, Euclidean algorithm, chinese remainder theorem, Pell's equation (Stillwell - Chapters 3, and 5). Divisibility, Bezout's identity, prime factorisation, fundamental theorem of arithmetic, division algorithms, GCD and LCM (Burton - Chapter 2, JJ - Chapter 1 and 2). Pigeonhole principle, Konigsberg problem (Stillwell - Chapter 25). 4. Elementary Concepts: Statements and quantifiers, sets, functions and methods of proofs (Goldberg Chapter 1, Burton - Chapter 1, Jones and Jones - Appendix A). Relations, equivalence, partitions, modular arithmetic (JJ - Appendix B, Section 3.1, 5.1-$5.3,6.1,8.2-8.5)$. Uncountability of R (Goldberg - Chapter 1). Double and triple integration, Jacobians and change of variables formula. Parametrization of curves and surfaces, vector fields, line and surface integrals. Divergence and curl. Theorems of Green, Gauss, and Stokes. |

Conway, Functions of one complex variable, 2nd edition, Springer, 1978. <br> 4. J. P. D'Angelo and D. B. West, Mathematical thinking: Problem-solving and Proofs, 2nd edition,Prentice Hall, 1997. <br> 5. R. R. Goldberg, Methods of real analysis, Oxform \& IBH Pub. (Indian Edition), 1970. <br> 6. P. R. Halmos, Naive set theory, Springer 1960 (Reprint 2017). <br> 7. G. A. Jones and J. M. Jones, Elementary number theory, Springer Math Undergrad Series, 1998 (Indian edition available). <br> 8. A. Kumar and S. Kumerasan, A Basic course in real analysis, CRC Press, 2014. |
| Description | Elementary Concepts: Statements and Quantifiers, Sets, Functions and Methods of proofs (Goldberg, Ch 1) (Burton, Ch 1) (Jones and Jones Appendix A). Basic Real Analysis: Least upper bound and applications, Archimedean property, Density of $\mathbb{Q}, \mathbb{R} \backslash \mathbb{Q}$, Greatest integer function, Nested Interval Theorem, Uncountability of $\mathbb{R}$ (Goldberg, Ch 1 ). Sequence of Real numbers: (Goldberg, Ch 2). Operations, Monotone sequences, Cauchy sequences. Convergence of Series: Convergence and divergence, Test for absolute convergence (Goldberg, Ch 3). Basic Algebra: Divisibility, Bezout's Identity, Prime Factorisation, Fundamental Theorem of Arithmetic, Division Algorithms, GCD and LCM (Burton, Ch. 2) (Jones and Jones Ch. 1 and 2). Relations, Equivalence, Partitions, Modular Arithmetic, Euler and Mobius functions and inversion. Groups and Subgroups (basic properties and examples) (Jones and Jones Appendix B, Sec 3.1, 5.1-5.3, 6.1, 8.2-8.5). Complex Plane: Polar representation and roots of unity, lines and half planes in $\mathbb{C}, \mathbb{C}$ as a vector space over $\mathbb{R}$, conjugation as a linear map over $\mathbb{R}$, extended complex plane and its spherical representation (Conway, Ch. 1). |

| Description | Review of basic concepts of real numbers: Archimedean property, Completeness. Metric spaces, compactness, connectedness, (with emphasis on $\mathbb{R}^{n}$ ). Continuity and uniform continuity. Monotonic functions, Functions of bounded variation; Absolutely continuous functions. Derivatives of functions and Taylor's theorem. Riemann integral and its properties, characterization of Riemann integrable functions. Improper integrals, Gamma functions. Sequences and series of functions, uniform convergence and its relation to continuity, differentiation and integration. Fourier series, pointwise convergence, Fejer's theorem, Weierstrass approximation theorem. |

Simmons, Introduction to Topology and Modern Analysis, McGraw-Hill, 1963. |
| Description | Topological Spaces: open sets, closed sets, neighbourhoods, bases, sub bases, limit points, closures, interiors, continuous functions, homeomorphisms. Examples of topological spaces: subspace topology, product topology, metric topology, order topology. <br> Quotient Topology: Construction of cylinder, cone, Moebius band, torus, etc. Connectedness and Compactness: Connected spaces, Connected subspaces of the real line, Components and local connectedness, Compact spaces, HeineBorel Theorem, Local -compactness. <br> Separation Axioms: Hausdorff spaces, Regularity, Complete Regularity, Normality, Urysohn Lemma, Tychonoff embedding and Urysohn Metrization Theorem, Tietze Extension Theorem. Tychnoff Theorem, One-point Compactification. Complete metric spaces and function spaces, Characterization of compact metric spaces, equicontinuity, Ascoli-Arzela Theorem, Baire Category Theorem. <br> Applications: space filling curve, nowhere differentiable continuous function. Optional Topics: Topological Groups and orbit spaces, Paracompactness and partition of unity, Stone-Cech Compactification, Nets and filters. |

| Prerequisite | MA 410 (Multivariable Calculus) |
| Text Reference | 1. B. A. Dubrovin, A. T. Fomenko, and S. P. Novikov, Modern Geometry Methods and Applications Part II: The Geometry and Topology of Manifolds, Springer-Verlag, 1985. <br> 2. V. Guillemin and A Pollack, Differential Topology Prentice-Hall Inc., Englewood Cliffs, New Jersey, 1974. <br> 3. J. Milnor, Topology from the Differential View-point, University Press of Virginia, Charlottsville 1990. <br> 4. A. R. Shastri, Elements of Differential Topology, CRC Press, 2011. |
| Description | Differentiable Manifolds in $\mathbb{R}^{n}$ : Review of inverse and implicit function theorems; tangent spaces and tangent maps; immersions; submersions and embeddings. Regular Values: Regular and critical values; regular inverse image theorem; Sard's theorem; Morse lemma. Transversality: Orientations of manifolds; oriented and mod 2 intersection numbers; degree of maps. Application to the Fundamental Theorem of Algebra. <br> *Lefschetz theory of vector fields and flows: Poincare-Hopf index theorem; Gauss-Bonnet theorem. <br> *Abstract manifolds: Examples such as real and complex projective spaces and Grassmannian varieties; Whitney embedding theorems. <br> (*indicates expository treatment intended for these parts of the syllabus.) |

| Description | Paths and homotopy, homotopy equivalence, contractibility, deformation retracts. Basic constructions: cones, mapping cones, mapping cylinders, suspension. Fundamental groups. Examples (including the fundamental group of the circle) and applications (including Fundamental Theorem of Algebra, Brouwer Fixed Point Theorem and Borsuk-Ulam Theorem, both in dimension two). Van Kampen's Theorem, Covering spaces, lifting properties, deck transformations. Universal coverings (existence theorem optional). Singular Homology. Mayer-Vietoris Sequences. Long exact sequence of pairs and triples. Homotopy invariance and excision theorem (without proof). Applications of homology: Jordan-Brouwer separation theorem, invariance of dimension, Hopf's Theorem for commutative division algebras with identity, Borsuk-Ulam Theorem, Lefschetz Fixed Point Theorem. |

| Selfstudy | 0 |
| Half Semester | N |
| Prerequisite | MA 401 (Linear Algebra) |
| Text Reference | 1. N. Alon, Combinatorial Nullstellensatz, Combinatorics, Probability, and Computing, Vol. 8 (1999), pp. 7-29. <br> 2. R. P. Stanley, Algebraic Combinatorics: Walks, Trees, Tableaux, and More, Springer, 2013. <br> 3. C. Godsil and G. F. Royle, Algebraic Graph Theory, Springer, 2001. <br> 4. F. Chung, Spectral Graph Theory, CBMS Regional Conference Series in Math., No. 92, American Mathematical Society, 1991. <br> 5. L. Babai and P. Frankl, Linear Algebra Methods in Combinatorics, Department of Computer Science, University of Chicago, Preliminary version, 1992. |
| Description | A selection of topics from the following: <br> Algebraic Graph theory: adjacency and Laplacian matrices of a graph, MatrixTree theorem, Cycle space and Bond space. <br> Algebraic Sperner theory: Sperner property of posets, algebraic characterization of strong Sperner property, unimodality of q-binomial coefficients. <br> Young Tableaux: Up-Down operators on the Young lattice and counting tableaux, RSK correspondence. <br> Enumeration under group action: Burnside's lemma, Polya theory. <br> Spectral Graph theory: Isoperimetric problems, Flows and Cheeger constants, Quasirandomness, expanders, and eigenvalues, random walks on graphs. The Combinatorial Nullstellensatz and some of its applications. Linear Algebra methods in Combinatorics. Association Schemes. Electrical Networks and resistances. Connections to Graph sparsification. |

| Description | Review of basic complex analysis: Cauchy's theorem, Liouville's theorem, power series representation, open mapping theorem, calculus of residues. Harmonic functions, Poisson integral, Harnack's theorem, Schwarz reflection principle. Maximum modulus principle, Schwarz lemma, Phragmen-Lindelof method. Runge's theorem, Mittag-Leffler theorem, Weierstrass theorem, conformal equivalence, Riemann mapping theorem, characterisation of simply connected regions, Jensen's formula. Analytic continuation, monodromy theorem, Little Picard theorem. |

Threlfall, A Textbook of Topology, Academic Press, 1980. |
| Description | Paths and homotopy, homotopy equivalence, contractibility, deformation retracts. Basic constructions: cones, mapping cones, mapping cylinders, suspension. Cell complexes, subcomplexes, CW pairs. Fundamental groups. Examples (including the fundamental group of the circle) and applications (including Fundamental Theorem of Algebra, Brouwer Fixed Point Theorem and BorsukUlam Theorem, both in dimension two). Van Kampen's Theorem. Covering spaces, lifting properties, deck transformations, universal coverings. Simplicial complexes, barycentric subdivision, stars and links, simplicial approximation. Simplicial Homology. Singular Homology. Mayer-Vietoris sequences. Long exact sequence of pairs and triples. Homotopy invariance and excision. Degree. Cellular Homology. Applications of homology: Jordan-Brouwer separation theorem, Invariance of dimension, Hopf's Theorem for commutative division algebras with identity, Borsuk-Ulam Theorem, Lefschetz Fixed Point Theorem. Optional Topics: Outline of the theory of: cohomology groups, cup products, Kunneth formulas, Poincare duality. |

| Description | Review of probability space. Random variables in $\mathbb{R}$ and $\mathbb{R}^{n}$, distribution of random variables, Expectation of a R-valued random variable, Change of variable formula, Fatou's lemma, monotone convergence theorem, dominated convergence theorem, Markov inequality, Jensen's inequality, notion of independence of sigma-fields and random variables, product of distributions, Fubini's theorem. Convergence almost surely, in probability, in law, convergence in moments, Borel-Cantelli lemma, Uniform integrability of sequence of random variables. Characteristic functions, convolution of distributions, Uniqueness theorem, inversion theorem. Weak law of large numbers, strong law of large numbers, Lindberg-Feller central limit theorem, Law of iterated logarithms. Radon Nikodym theorem (reading exercise), Condition expectation definition, existence and its properties, regular conditional law |

| Course Name | Topics in Differential Equations 2 |
|  | A selection of topics from the following: Diffeomorphisms and flows: Elemen- <br> tary dynamics of diffeomorphisms, flows and differential equations, conjugacy, <br> equivalence of flows, Sternberg's theorem on smooth conjugacy (statement <br> only), Hamiltonian flows and Poincare maps. Local properties of flows and <br> diffeomorphisms: Hyperbolic fixed points, Hartman-Grobman theorems for <br> maps and flows, Normal forms for vector fields, Centre manifolds. Structural <br> stability and hyperbolicity: Structural stability for linear systems, Flows on <br> 2-dimensional manifolds, Peixoto's characterisation of structural stability on <br> unit disc, Anosov and Horseshoe diffeomorphisms, Homoclinic points, Mel- <br> nikov function. Bifurcations and Perturbations: Saddle-node and Hopf bifur- <br> cations, Andronov-Hopf bifurcation, The logistic map, Arnold's circle map; <br> Perturbation theory: Melnikov's method for the study of perturbation of com- <br> pletely integrable systems. Floquet theory and Hill's equation and some of its <br> applications. Two dimensional systems: Poincare-Bendixon theorem, Index of <br> planar vector fields and the Poincare Hopf index theorem for two dimensional <br> manifolds. Van der Pol's equation, Duffing's equation, Lorenz's equation. First <br> integrals and functional independence of first integrals, notion of complete in- <br> tegrability, Jacobi multipliers, Liouville's theorem on preservation of phase <br> volume, Jacobi's last multiplier theorem and its applications. |

| :--- | :--- |
| Course Name | Communication Skills |
|  | Context of communication: Recognizing our capability and roles as profes- <br> sionals. Scientific Method: Question and answer aspects of technical commu- <br> nication; Scientific Methodology and its relationship to technical communi- <br> cation;Surveying literature: Categories; reading and organizing scientific lit- <br> erature; search engines and tools. Listening and Note taking: 5-R method <br> and mind-mapping.Technical writing: Report organization; Journal selec- <br> tion; Introduction, conclusion, and abstract writing. Speaking \& Presentation <br> skills: Organization of presentation slides (number, content, and formatting); |
|  | Oral presentations; Audience/context dependent practices; Nonverbal aspects: <br> body language, eye-contact, personal appearance, facing large audience. El- <br> evator pitch: Pitches for technical audience and policymakers. Workplace <br> communication: Sensitivity towards gender and diversity; Email communi- <br> cation and netiquettes.Ethics in academic communication: Intellectual Prop- <br> erty,copyrights and plagiarism; Authorship; Data ethics; Biases and balanced <br> criticism of literature;Suggested additional topics relevant to disciplines: Data <br> representation, Group discussion and interviews; accessible scientific writing, <br> report writing using LaTeX, Proofreading, etc |

Applied Linear Statistical Models, 5th Edition, McGraw-Hill Companies, Boston, 2005. |
| Description | Simple and multiple linear regression models - estimation, tests and confidence regions. Simultaneous testing methods- Bonferroni method etc. Analysis of Variance for simple and multiple regression models. Analysis of residuals. Lack of fit tests. Checks (graphical procedures and tests) for model assumptions: Normality, homogeneity of errors, independence, correlation of covariates and errors. Multicollinearity, outliers, leverage and measures of influence. Model selection (stepwise, forward and backward, best subset selection) and model validation. Discussion of algorithms for model selection. Regression models with indicator variables. Polynomial regression models. Regression models with interaction terms. Transformation of response variables and covariates. Variance stabilizing transformations, Box-Cox method. Ridge's regression. Weighted Regression. |

| Description | Random phenomena, sample spaces, events, sigma algebra, probability space, properties of probability, conditional probability, independence, Bayes formula, Polya's urn model. Discrete random variable, probability mass function, independent random variables, sum of random variables, random vector, expectation of discrete random variable, properties of expectation and variance. Continuous random variable, distribution function, density of a continuous random variable, expectation, change of variable formula, random vector, joint distribution of random variables, joint density, distribution of sums and products of random variables, conditional density, conditional expectation, order statistics, moment generating function, characteristic function, brief introduction to moment problem. Inequalities: Markov, Chebyshev, Schwarz and Chernoff bound. Convergence in probability, almost sure convergence, convergence in distribution, relation between these three modes of convergences, weak law of large numbers (WLLN), strong law of large numbers (SLLN), central limit theorem (CLT). |

| Description | Review of sequences and series of real numbers. Limit superior and limit inferior, Cauchy sequences and completeness of $\mathbb{R}$. Tests for convergence of series of real numbers. Basic notions of Metric Spaces with emphasis on $\mathbb{R}^{n}$. Heine Borel Theorem. Continuity and Uniform continuity. Derivatives. Mean Value Theorem and applications. Functions of bounded variation. Riemann- Stieltjes integral. Improper integrals and Gamma function. Sequences and series of functions. Uniform convergence, interchanging limits with integrals and derivatives. Arzela-Ascoli theorem (statement only). Functions of sev- eral variables: Partial derivative, directional derivative, total derivative; Mean value theorem, Taylor's theorem. |

Mukhopadhyay, P., Theory and Methods of Survey Sampling, PrenticeHall of India New Delhi, 1998. |
| Description | Principals of sample survey, Probability sampling, Non-probability sampling, Simple random sampling, Estimation of population total, Variance estimation, finite population correction, Random sampling with replacement, linear estimators of population mean, Sampling for proportions and percentages, sample size estimation for proportion as well as continuous data in random sampling. Stratified random sampling, Estimator of population total and its variance, Optimum allocation, comparison between stratified and simple random sampling, Stratified sampling for proportion and sample size estimation, construction of strata, Number of strata, Quota sampling. Ratio estimator, estimation of variance from sample, comparison between ratio estimator and best linear unbiased estimator, bias of ratio estimates, ratio estimates in stratified sampling. Regression estimators, Large sample comparison with ratio estimate. Single stage cluster sampling with equal and unequal cluster sizes, Sampling with probability proportion to size, selection with unequal probabilities with and without replacement, the Horvitz Thompson estimator, Brewer's method, Murthy's method, Rao, Hartley and Cochran method. Two stage sampling with units of equal and unequal sizes. Introduction to randomized response techniques with examples and estimation. |

Minimaxity and admissibility: Minimax estimation, admissibility and minimaxity in exponential families, admissibility and minimaxity in group families, Simultaneous estimation. Maxmin tests and invariance, Hunt-stein Theorem, Most stringent tests. Multiple testing via Maximin procedures and Scheffé's S-method.
U-statistics: Variance computation and projection method. Convergence of U statistics (one sample and two samples). Linear rank statistics. Asymptotic normality under null hypothesis. Pitman's Asymptotic relative efficiency, Noether's theorem for evaluating asymptotic relative efficiency. Bahadur's efficiency. Resampling techniques. Robust inference: Break-down point in finite sample, Influence curve. M-estimator, L-estimator, Restimator, minimum distance estimator and Pitman's estimator. Relations to minimax estimator and equivariant estimators. Robust tests and confidence sets.

| Description | Introduction to Bayesian Theory and methods; non-informative priors and conjugate priors; posterior inference (with special reference to one parameter exponential family)-credible intervals and hypothesis testing; hierarchical and empirical Bayesian models; computational techniques for use in Bayesian analysis, especially the use of simulation from posterior distributions, with emphasis on the WinBUGS package as a practical tool. MCMC simulation (Markov chains; Metropolis-Hastings algorithm; Gibbs sampling; convergence), EM algorithm, Bootstrap (Bootstrapping; jackknife resampling; percentile confidence intervals). Permutation tests. |
